1.0 Project Information

1.1 Project Background

As the restrictions due to the COVID-19 pandemic are to be eased, students may have the chance to travel around within the country. This is especially interesting for exchange students who will be in a physical and cultural environment different from their home country. In addition, the country also benefits from this as domestic travelling may help build back the economy that got tough throughout the pandemic. To help these students, Monash was sponsored to create a web application to ease their planning process. The requirements of this project were discussed and set by the representative of the client which is Lauren, with the help of Oliver who gives his viewpoint as an exchange student in Monash.

1.2 Project Summary

In the context described above, this project aims to create a user friendly web application targeting students who are interested in domestic travel. The web application will be used by students to create their travel plan according to the information available for view in the application, no matter if it is a single direct flight or multiple connecting flights. As the pandemic is still not completely over, students might have sudden changes in plans and should be allowed to cancel planned trips. The web app should have the features listed in the coming sections below. These features are set according to the requirements of the clients.

2.0 List of Features

For each user story associated with a feature, an estimation of the time and difficulty required to work on the feature is labelled using t-shirt sizes ('XS','S','M','L','XL', etc.), where XS is least difficult and the difficulty increases with each size.

The following list of features should be in the web application:

1. Selecting a Destination
2. Airports Listed on the Map
3. Selecting an Airport and Displaying All Routes
4. Displaying Flight Information
5. Adding Connecting Flights
6. Navigation Bar
7. Creating and Logging in to an Account
8. Help Support
9. Edit Account Details
10. Brief Summary of Saved Trips
11. Full Summary of the Saved Trip
12. Cancellation of Saved Trips
13. View Previous Trips
14. Logging Out of Account

Feature 1: Selecting a Destination

User Story: [S]

As a user, I want to be able to search for a country so that I can plan my trip within that country.

Acceptance Criteria:

1. The user should be able to search for valid countries.
2. A dropdown list of countries matching the user input in the search bar should appear.
3. The user should be able to select only one country.

User Story: [S]

As a user, I want to be able to select a date to start my trip so that I know the availability of trips.

Acceptance Criteria:

1. The user should be able to select a valid date in the future.
2. The user should be able to select only one date.
3. The date selected should be the day the user's trip begins.

Feature 2: Airports Listed on the Map

User Story: [M]

As a user, I want to be able to see a map of the country with all the airports so that I can visualise the different possible locations I can travel to within a country.

Acceptance Criteria:

1. Only the map of the user-selected country should be displayed.
2. The user should be able to drag and zoom in on the map.
3. All the airports within the country should be displayed.
4. Each airport should be marked with a symbol to indicate that they are an airport.
5. The airports should be labelled with the correct name when clicked on.
 - a. The user should be able to close the label.

Feature 3: Selecting an Airport and Displaying All Routes

User Story: [L]

As a user, I want to be able to select an airport on the map so that I can see all the available routes from that airport.

Acceptance Criteria:

1. The user should be able to select only one airport on the map.
2. The map should then display all available domestic routes as continuous lines from the chosen airport to other airports.
3. Once a route to a destination is selected:
 - a. The user should add the route to their current trip (via a button)
 - b. All other routes from the chosen airport should disappear
 - c. The destination airport should then become the new departing airport.

Feature 4: Displaying Flight Information

User Story: [L]

As a user, I want to be able to see information about the routes so that I can make informed decisions on my trip.

Acceptance Criteria:

1. The user should be able to select only one route at a time.
2. After having selected a route:
 - a. There should be a popup to show relevant details.
 - b. The user should be able to see the name and location of the destination airport.
 - c. The user should be able to see the name of an airline that runs between the departing and arriving airports.
 - d. The user should be able to see the number of stops in the flight.

Feature 5: Adding Connecting Flights

User Story: [M]

As a user, I want to be able to select connecting flights when planning my trip so that I can reach my final desired destination.

Acceptance Criteria:

1. The user should be able to choose if they want to add a connecting flight or not.
 - a. If they choose not to add a connecting flight, they will “confirm” their trip.
 - i. When they confirm their trip, a summary of the whole trip should be provided.
 - ii. The user should be able to save their trip by adding it to their account or create a new trip.
 - b. If the user chooses to add a connecting flight, all the possible routes from the new destination should be provided.
2. There should be no limitation on the number of connecting flights.
3. Each time the user adds a connecting flight, they will be asked to continue adding or confirm the trip.
 - a. Only when they have confirmed the trip should a summary of their whole trip and an option to save or cancel their trip be provided.
4. As the user adds more connecting flights, previous flight routes should also be shown.

Feature 6: Navigation Bar

User Story: [M]

As a user, I want a navigation bar so that I can easily access the different features of the web app.

Acceptance Criteria:

1. The navigation bar should be accessible throughout the program.
2. If the user has not logged in, the navigation bar should allow the user to log in or create an account as well as view the routes available in any country.
3. If the user has logged in, the navigation bar should do the following:
 - a. The user should be able to go to the homepage, saved/scheduled trips page, past trips page.
 - b. There should be an "Account" drop down list that allows the user to edit their account details or log off.
4. The selected page on the navigation bar should be highlighted in the navigation bar.
5. The navigation bar should show the name and logo.
6. The navigation bar should not be tabs. Instead it should be hyperlinks.
7. The navigation menu should be on the left side and is hideable.

Feature 7: Creating and Logging in to an Account

User Story: [S]

As a user, I want to be able to create an account so that I can save the trips I made.

Acceptance Criteria:

1. The user should be able to easily create an account by providing their name, email and a password.
2. The password should be hidden when they enter it.
3. The password should contain at least eight characters in length as well as one lowercase letter, one uppercase letter, and one number.
 - a. The user should be informed of these requirements especially if the password entered does not fit this requirement.
4. The user should be asked to confirm their password before creating an account.

User Story: [S]

As a user, I want to be able to log in so that I can save the trip I made to my account.

Acceptance Criteria:

1. The user should be able to log in by providing entering the correct email and password.
2. If the incorrect email or password is entered, the user should be notified and allowed to try again.
3. Once they have logged in, the user should be taken to their respective location.
 - a. If they decided to log in, without performing any other action, they should be taken to the homepage.
 - b. If they had to log in to save a trip, they should be taken to the saved trip page.
4. The user should be allowed to not log in.
 - a. In this case, they should be taken to the homepage.
5. The email address should be shown, but the password should be hidden.

Feature 8: Help Support

User Story: [S]

As a user, I want to be able to be able to contact the organisation so that I get further information.

Acceptance Criteria:

1. The help button should be in the footer.
2. The user should be able to access the help button on any page.
3. The help information should be displayed as a pop up.
4. The help page should provide a phone number and email address so that users can provide feedback or seek further assistance.
5. The help page should be easy to navigate and read by using appropriate formatting techniques.

Feature 9: Edit Account Details

User Story: [L]

As a user, I want to be able to edit my account details so that they are up to date.

Acceptance Criteria:

1. The user should be able to change their name and email address.
 - a. In order to confirm these changes, the user should be required to enter their password to confirm them.
2. If the user wishes to change their password, they should be required to first enter their current password and then their new password.
 - a. The new password should be confirmed before it is saved.
 - b. The password should contain at least eight characters in length as well as one lowercase letter, one uppercase letter, and one number.
 - c. The user should be informed of these requirements especially if the password entered does not fit this requirement.

Feature 10: Brief Summary of Saved Trips

User Story: [S]

As a user I want to see brief information about all my scheduled trips in a single page, so that I can plan my vacations accordingly.

Acceptance Criteria:

1. The user should be able to see and have access to all the upcoming scheduled trips in the scheduled trips page.
2. The user should be able to get brief information about all the scheduled trips present in the scheduled trips page. The brief information includes -
 - a. The travel date
 - b. The starting location of the trip
 - c. The destination
3. Once the user completes one of the scheduled trips, the scheduled trip has to be removed from the list and moved to the past trip.

Feature 11: Full Summary of the Saved Trip

User Story: [M]

As a user I want to click any one of the scheduled trips in the save trips page, so that I can get the complete information about that saved trip.

Acceptance Criteria:

1. The user should be able to click on any specific scheduled trip so that they can get complete information regarding that specific clicked trip.
2. The complete information includes -
 - a. The starting location of the trip.
 - b. The destination.
 - c. The airline by which the user will be travelling.
 - d. Any transits if taken to reach the destination.
 - e. The latitude of the selected airport.
 - f. The longitude of the selected airport.
3. The user after reviewing the complete information, will have one option -
 - a. Move back to the saved/scheduled trips page.

User Story: [L]

As a user, I want to be able to see the route map of the trip so that I can be organised with the trip and understand the locations better in a geographic sense.

Acceptance Criteria:

1. The user should be able to see basic details about the route via the map.
2. The user should be able to drag and zoom in on the map.
3. The user should be explicitly able to see the following information in the route map -
 - a. The departure airport of the trip.
 - b. The arrival (destination) airport of the trip.
 - c. Transit locations (If any taken by the user).
4. The user should be able to see the starting location and destination location along with transits (if any) connected by a continuous line which indicates its flight path.

Feature 12: Cancellation of Saved Trips

User Story: [M]

As a user I want to be able to cancel any scheduled trips so that it is up to date with my plans.

Acceptance Criteria:

1. Only in the full summary of a trip should a user be allowed to cancel the trip.
2. The user should be able to cancel the trip by clicking on the cancel button.
3. On clicking the cancel button, it should prompt the user with a message box to confirm the request to cancel the saved trip.
4. After completion of the process, the user should be redirected to the scheduled trips page.
5. Once the trip is cancelled the user should no longer be able to see that specific trip on the scheduled trips list.

Feature 13: View Previous Trips

User Story: [M]

As a user, I want to keep a record of previous trips information so that I am able to check my past trips.

Acceptance Criteria:

1. The user should have to login first to view past trips.
2. Users should be able to access and view previous trips.
3. The previous trips should be on a separate page as required.
4. The page with all past history of trips should be updated every time a scheduled trip is completed.
5. Identical to the saved trips page, the user should be able to view a summary of all the previous trips and get more details about them by clicking on them.

Feature 14: Logging Out of Account

User Story: [S]

As a user, I want to be able to log out of my account so that no one can tamper with the trips I have saved.

Acceptance Criteria:

1. There should be a log off button visible on the navigation bar under the accounts hyperlink/list.
2. Before the user signs out, they should confirm that they wanted to sign out.
3. A message showing the success of logging off should pop up when the user logs off successfully.
4. The user should be brought back to the homepage of the web app after logging off.
5. The user should not be able to access any pages that require logging in after logging off.
